TECHNICAL CHARACTERISTICS

- Rectangular pedal: It has a larger contact area with the feet than the tube-type pedal, which makes it more stable to support the feet. Reduces ankle loading during seated row exercises and facilitates focused activation of the back muscles. The foot height is closer to the relative seat height, providing a higher foot pivot point for better activation of the leg muscles when the back muscles are activated.
- 10-position adjustable pulley: The height of the pulley can be freely selected according to the user's torso ratio and different back training areas.
- Cushion: Black color and PU material. It has an extended surface to comfortably perform the rowing exercise.
- Transmission: By cable.
- Grips: Rubberized.
